Test Name	Result	Flag	Reference Range	Lab
LYME DISEASE AB W/REFL TO BLOT (IGG, IGM)				
LYME AB SCREEN	<0.90	NORMAL	index	01
Index Interpretation				

< 0.90 Negative				
0.90-1.09 Equivocal				
> 1.09 Positive				

As recommended by the Food and Drug Administration (FDA), all samples with positive or equivocal results in a Borrelia burgdorferi antibody screen will be tested using a blot method. Positive or equivocal screening test results should not be interpreted as truly positive until verified as such using a supplemental assay (e.g., B. burgdorferi blot).

The screening test and/or blot for B. burgdorferi antibodies may be falsely negative in early stages of Lyme disease, including the period when erythema migrans is apparent.
